

ABSTRACT OF THE DISCLOSURE

ELONGATED VENTED GUN BARREL

5 The elongated vented gun barrel may be used with a conventional firearm
such as a shotgun or rifle. Strategically placed vents or ports may be placed along the
length of the elongated gun barrel which function to slowly bleed off high pressure
gasses within the elongated gun barrel following discharge of the firearm. The vents or
ports facilitate the discharge of high pressure gasses at a controlled rate to reduce the
10 report of a firearm. The gradual release of the high pressure gasses minimizes the
shockwave following discharge from the conventional firearm.
